RECENT WORK EXPERIENCE

FRESHPAINT | SENIOR SOFTWARE ENGINEER => GOLANG, POSTGRES

Aug 2023 - present | Remote

Insights:

- Lead Engineer for a cross-platform insights product spanning all customer marketing channels.
- Built the core dbt attribution models that convert raw event data into high-signal, actionable insights, establishing patterns that the team later extended to support multi-touch attribution, impressions, and referrers.
- Scoped the project from inception, drove performance and scalability, and led the adoption of Snowflake for the persistence layer.

Ad Performance:

- Created and launched an offline attributions product that connects our customers highly sensitive EHR data to their marketing pipeline while maintaining HIPAA compliance.
- Enabled customers to safely optimize campaigns based on previously off-limit BOFU conversion data, resulting in a 20% lift in ROI.

Web Tracker Monitoring:

- Created and launched a web crawler that continuously scans our customers' sites for web trackers and notifies them of potential privacy violations.
- Built a management console to track, triage, and resolve each flagged web tracker.

CARTA | SOFTWARE ENGINEER => PYTHON, DJANGO

Jan 2022 - Jan 2023 | San Francisco

- Tech lead for background check integration to reduce fraud and meet industry compliance standards.
- Built an in-app messaging center for company execs to communicate with their stakeholders. Wrote the code from scratch and shipped to customers well within one quarter.
- Improvements to production data quality and integrity integral to Carta's core business value.

PARABOL | SENIOR BACKEND ENGINEER => NODE.JS, TYPESCRIPT

Jun 2020 - Jan 2022 | Remote

- Led our DB migration from RethinkDB to PostgreSQL with zero downtime in production.
- Single-handedly implemented an in-house video integration prototype using low level API provided by mediasoup SFU library.
- Helped us reach industry standard security compliance by automating backups, encrypting production data at rest, protecting staging and development environments, etc.

LYTE | BACKEND ENGINEER => PYTHON, DJANGO

Apr 2018 - Mar 2020 | San Francisco, CA

- Lead Engineer for external integrations which generated \$13M+ in revenue in 2019.
- Migrated our fulfillment monolith over to modular microservices, making our entire fulfillment system easier to scale, extend, and debug.
- Rewrote the data modeling and business logic for our pricing engine to display line item receipts based on dynamic fee structures.

SUMMARY

Backend server engineer with 7+ years of professional experience within high-growth startups, from seed stage to pre-IPO companies. Works best in highly collaborative, high-trust, and agile team settings. Some things I care about deeply are better abstractions, managing complexity, organizational knowledge-sharing, and developer happiness.

ACHIEVEMENTS

SPEAKING

Spoke at SFNode, 42 Silicon Valley, and Berkeley Javascript Dojo.

WRITING

Author of various technical articles, including "Building Prefixy" and "How We Built Prefixy".

SKILLS

LANGUAGES

Golang • Python • SQL • Node.js • Typescript • Ruby

DATA STORES

PostgreSQL • Redis • MongoDB • Snowflake

PLATFORM

Docker • AWS • Terraform • K8s • dbt

ETC

grpc • git • ssh • unix • vim • vscode

EDUCATION

UCLA

BA PHILOSOPHY

Los Angeles, CA

Summa cum laude • GPA: 3.96

Recipient of the Kalish Prize for Intellectual Excellence. Each year the faculty award this prize to one or more of their most promising undergrad students. While studying analytic philosophy, spent nights and weekends on writing various programs in Python and Ruby.
